

CLAIMS

LISTING OF CLAIMS

1. (Currently Amended) A method for improving utilization of satellite capacity of a satellite system that uses multiple uplink spot beams and downlink spot beams, comprising: ~~integrating operating~~ an area-wide broadcast downlink beam of a satellite ~~for supporting to be used to support~~ point-to-point transmissions of one or more of the multiple spot beams of the satellite whose transmission capacity has been exhausted.
2. (Original) A method as recited in claim 1, further comprising: allocating a full primary spectrum of one polarization to uplink and downlink spot beams for point-to-point transmissions, and allocating a full primary spectrum of a polarization opposite to the one polarization to the area-wide broadcast downlink beam for broadcast transmissions.
3. (Original) A method as recited in claim 2, further comprising: assigning the full primary spectrum for broadcast transmissions in minimum-resolution broadcast bands.
4. (Original) A method as recited in claim 3, wherein the minimum-resolution broadcast bands are assigned to any and all uplink spot beams in any combination as configured by a network control center.

5. (Previously Presented) A method as recited in claim 4, wherein each one of the multiple uplink and downlink spot beams can access the full primary spectrum for broadcast transmissions in increments of one minimum-resolution broadcast band and can transmit on at least a portion of at least one minimum-resolution broadcast band.
